FURTHER MATHEMATICS/MATHEMATICS (ELECTIVE)

AIMS OF THE SYLLABUS

The aims of the syllabus are to test candidates’

(i) development of further conceptual and manipulative skills in Mathematics;

(ii) understanding of an intermediate course of study which bridges the gap between Elementary Mathematics and Higher Mathematics;

(iii) acquisition of aspects of Mathematics that can meet the needs of potential Mathematicians, Engineers, Scientists and other professionals.

(iv) ability to analyse data and draw valid conclusion

(v) logical, abstract and precise reasoning skills.

EXAMINATION SCHEME

There will be two papers, Papers 1 and 2, both of which must be taken.

PAPER 1: will consist of forty multiple-choice objective questions, covering the entire syllabus. Candidates will be required to answer all questions in $1\frac{1}{2}$ hours for 40 marks. The questions will be drawn from the sections of the syllabus as follows:

- Pure Mathematics: 30 questions
- Statistics and probability: 4 questions
- Vectors and Mechanics: 6 questions

PAPER 2: will consist of two sections, Sections A and B, to be answered in $2\frac{1}{2}$ hours for 100 marks.

Section A: will consist of eight compulsory questions that are elementary in type for 48 marks. The questions shall be distributed as follows:

- Pure Mathematics: 4 questions
- Statistics and Probability: 2 questions
- Vectors and Mechanics: 2 questions

Section B: will consist of seven questions of greater length and difficulty put into three parts: Parts I, II and III as follows:

- Part I: Pure Mathematics: 3 questions
Part II: Statistics and Probability - 2 questions
Part III: Vectors and Mechanics - 2 questions

Candidates will be required to answer four questions with at least one from each part for 52 marks.

**DETAILED SYLLABUS**

In addition to the following topics, more challenging questions may be set on topics in the General Mathematics/Mathematics (Core) syllabus.

In the column for CONTENTS, more detailed information on the topics to be tested is given while the limits imposed on the topics are stated under NOTES.

Topics which are marked with asterisks shall be tested in Section B of Paper 2 only.

**KEY:**

* Topics peculiar to Ghana only.

** Topics peculiar to Nigeria only

\[
a + \frac{b}{c} = d \cdot
\]

Use of properties to solve related problems.

Using logical reasoning to determine the validity of compound statements involving implications and connectivities. Include use of symbols: \( \neg P \), \( p \lor q \), \( p \land q \), \( p \Rightarrow q \).

Use of Truth tables to deduce conclusions of compound statements. Include negation.

The notation e.g. \( f : x \rightarrow 3x+4 \); \( g : x \rightarrow x^2 \); where \( x \in R \).

Graphical representation of a function; Image and the range.

Determination of the inverse of a one-to-one function e.g. If \( f: x \rightarrow 3x + \frac{4}{3} \), the inverse relation \( f^{-1}: x \rightarrow \frac{1}{3}x - \frac{4}{9} \) is also a function.

Notation: \( f \circ g(x) = f(g(x)) \)

Restrict to simple algebraic functions only.

Recognition and sketching of graphs of linear functions and equations.

Gradient and intercepts forms of linear equations i.e. \( ax + by + c = 0 \); \( y = mx + c \); \( \frac{y}{x} + \frac{c}{b} = k \). Parallel and Perpendicular lines. Linear Inequalities e.g. \( 2x + 5y \leq 1 \), \( x + 3y \geq 3 \).

<tbody>
<tr>
<td>(ii) Quadratic Functions, Equations</td>
<td>Graphical representation of linear inequalities in two variables. Application to Linear Programming. Recognition and sketching graphs of quadratic functions e.g. $f: x \rightarrow ax^2 + bx + c$, where $a$, $b$ and $c \in \mathbb{R}$. Identification of vertex, axis of symmetry, maximum and minimum, increasing and decreasing parts of a parabola. Include values of $x$ for which $f(x) &gt; 0$ or $f(x) &lt; 0$. Solution of simultaneous equations: one linear and one quadratic. Method of completing the squares for solving quadratic equations. Express $f(x) = ax^2 + bx + c$ in the form $f(x) = a(x + d)^2 + k$, where $k$ is the maximum or minimum value. Roots of quadratic equations – equal roots ($b^2 - 4ac = 0$), real and unequal roots ($b^2 - 4ac &gt; 0$), imaginary roots ($b^2 - 4ac &lt; 0$); sum and product of roots of a quadratic equation e.g. if the roots of the equation $3x^2 + 5x + 2 = 0$ are $\alpha$ and $\beta$, form the equation whose roots are $\frac{1}{\alpha}$ and $\frac{1}{\beta}$. Solving quadratic inequalities.</td>
</tr>
<tr>
<td>(ii) Cubic Functions and Equations</td>
<td>Recognition of cubic functions e.g. $f: x \rightarrow ax^3 + bx^2 + cx + d$. Drawing graphs of cubic functions for a given range. Factorization of cubic expressions and solution of cubic equations. Factorization of $a^3 \pm b^3$. Basic operations on polynomials, the remainder and factor theorems i.e. the</td>
</tr>
</tbody>
</table>
### (7) Rational Functions

(i) Rational functions of the form $Q(x) = \frac{f(x)}{g(x)}$, $g(x) \neq 0$.
where $g(x)$ and $f(x)$ are polynomials. e.g.

$$f(x) \rightarrow \frac{ax+b}{px^2+qx+r}$$

(ii) Resolution of rational functions into partial fractions.

### (8) Indices and Logarithmic Functions

(i) Indices

Laws of indices.
Application of the laws of indices to evaluating products, quotients, powers and nth root.
Solve equations involving indices.

(ii) Logarithms

Laws of Logarithms. Application of logarithms in calculations involving product, quotients, power ($\log a^n$), nth roots ($\log \sqrt[n]{a}$, $\log a^{1/n}$).
Solve equations involving logarithms (including change of base).
Reduction of a relation such as $y = ax^b$, $(a,b$ are constants) to a linear form:

$$\log_{10} y = b \log_{10} x + \log_{10} a.$$  
Consider other examples such as $\log ab^x = \log a + x \log b$;
<table>

</thead>
</table>
| (9) Permutation And Combinations. | (i) Simple cases of arrangements  
(ii) Simple cases of selection of objects. |
| (10) Binomial Theorem | Expansion of \((a + b)^n\).  
Use of \((1+x)^n \approx 1+nx\) for any rational \(n\), where \(x\) is sufficiently small. e.g \((0.998)^{1/3}\)  
| (11) Sequences and Series | (i) Finite and Infinite sequences.  
(ii) Linear sequence/Arithmetic Progression (A.P.) and Exponential sequence/Geometric Progression (G.P.)  
(iii) Finite and Infinite series.  
(iv) Linear series (sum of A.P.) and exponential series (sum of G.P.) |
| | \[\log(ab)^x = x(\log a + \log b) = x \log ab\]  
*Drawing and interpreting graphs of logarithmic functions e.g. \(y = ax^n\). Estimating the values of the constants \(a\) and \(b\) from the graph  
Knowledge of arrangement and selection is expected. The notations: \(^nC_r\), \(^nP_r\) for selection and arrangement respectively should be noted and used. e.g. arrangement of students in a row, drawing balls from a box with or without replacements.  
\[^nP_r = \frac{n!}{(n-r)!}\]  
\[^nC_r = \frac{n!}{r!(n-r)!}\]  
Use of the binomial theorem for positive integral index only.  
Proof of the theorem **not** required.  
e.g. (i) \(u_1, u_2, ..., u_n\).  
(ii) \(u_1, u_2, ...\)  
Recognizing the pattern of a sequence. e.g.  
(i) \(U_n = U_1 + (n-1)d\), where \(d\) is the common difference.  
(ii) \(U_n = U_1 r^{n-1}\) where \(r\) is the common ratio.  
(i) \(U_1 + U_2 + U_3 + ... + U_n\)  
(ii)\(U_1 + U_2 + U_3 + ....\)  
\[S_n = \frac{n}{2}(U_1+U_n)\]  
\[S_n = \frac{r}{2}[2a + (n - 1)d]\]
| (12) Matrices and Linear Transformation | *(v) Recurrence Series | (iii) $S_n = U_1(1-r^n), r < 1$
(iv) $S_n = U_1(r^n-1), r > 1$.
(v) Sum to infinity $(S) = \frac{a}{1-r}$, $r < 1$
| (i) Matrices | Generating the terms of a recurrence series and finding an explicit formula for the sequence e.g. $0.9999 = \frac{9}{10} + \frac{9}{10^2} + \frac{9}{10^3} + \frac{9}{10^4} + ...$
| (ii) Determinants | Concept of a matrix – state the order of a matrix and indicate the type.
Equal matrices – If two matrices are equal, then their corresponding elements are equal. Use of equality to find missing entries of given matrices.
Addition and subtraction of matrices (up to 3 x 3 matrices).
Multiplication of a matrix by a scalar and by a matrix (up to 3 x 3 matrices).
| (iii) Inverse of 2 x 2 Matrices | Evaluation of determinants of 2 x 2 matrices.
**Evaluation of determinants of 3 x 3 matrices.
| (iv) Linear Transformation | Application of determinants to solution of simultaneous linear equations.
\[ \text{e.g. If } A = \begin{pmatrix} a & b \\ c & d \end{pmatrix}, \text{ then } \]
\[ A^{-1} = \frac{1}{ad-bc} \begin{pmatrix} d & -b \\ -c & a \end{pmatrix} \]
Finding the images of points under given linear transformation. |
Determining the matrices of given linear transformation.
Finding the inverse of a linear transformation (restrict to 2 x 2 matrices).
Finding the composition of linear transformation.
Recognizing the identity transformation.

(i) \[
\begin{pmatrix}
1 & 0 \\
0 & -1
\end{pmatrix}
\] reflection in the x-axis

(ii) \[
\begin{pmatrix}
-1 & 0 \\
0 & 1
\end{pmatrix}
\] reflection in the y-axis

(iii) \[
\begin{pmatrix}
0 & 1 \\
1 & 0
\end{pmatrix}
\] reflection in the line \(y = x\)

(iv) \[
\begin{pmatrix}
\cos \theta & -\sin \theta \\
\sin \theta & \cos \theta
\end{pmatrix}
\] for anti-clockwise rotation through \(\theta\) about the origin.

(v) \[
\begin{pmatrix}
\cos2\theta & \sin2\theta \\
\sin2\theta & -\cos2\theta
\end{pmatrix}
\] the general matrix for reflection in a line through the origin making an angle \(\theta\) with the positive x-axis.

*Finding the equation of the image of a line under a given linear transformation

Sine, Cosine and Tangent of general angles \((0^\circ \leq \theta \leq 360^\circ)\).
Identify trigonometric ratios of angles \(30^\circ, 45^\circ, 60^\circ\) without use of tables.
Use basic trigonometric ratios and reciprocals to prove given trigonometric identities.
Evaluate sine, cosine and tangent of negative angles.
Convert degrees into radians and vice versa.
Application to real life situations such as heights and distances, perimeters, solution of triangles, angles of elevation and depression,
| (14) Co-ordinate Geometry | (i) Straight Lines | bearing (negative and positive angles) including use of sine and cosine rules, etc. Simple cases only.

\[
\sin (A \pm B), \cos (A \pm B), \tan (A \pm B).
\]

Use of compound angles in simple identities and solution of trigonometric ratios e.g. finding \( \sin 75^\circ, \cos 150^\circ \) etc., finding tan \( 45^\circ \) without using mathematical tables or calculators and leaving your answer as a surd, etc.

Use of simple trigonometric identities to find trigonometric ratios of compound and multiple angles (up to 3A).

Relate trigonometric ratios to Cartesian Coordinates of points \((x, y)\) on the circle \(x^2 + y^2 = r^2\).

\[f: x \rightarrow \sin x,\]
\[g: x \rightarrow a \cos x + b \sin x = c.\]

Graphs of sine, cosine, tangent and functions of the form \(a \sin x + b \cos x\). Identifying maximum and minimum point, increasing and decreasing portions. Graphical solutions of simple trigonometric equations e.g. \(\sin x + b \cos x = k\).

Solve trigonometric equations up to quadratic equations e.g. \(2\sin^2 x - \sin x - 3 = 0\), for \(0^\circ \leq x \leq 360^\circ\).

*Express \(f(x) = a \sin x + b \cos x\) in the form \(R \cos (x \pm \alpha)\) or \(R \sin (x \pm \alpha)\) for \(0^\circ \leq \alpha \leq 90^\circ\) and use the result to calculate the minimum and maximum points of a given functions.

1. **UNITS**
Candidates should be familiar with the following units and their symbols.

(1) **Length**
1000 millimetres (mm) = 100 centimetres (cm) = 1 metre (m).
1000 metres = 1 kilometre (km)

(2) **Area**
10,000 square metres (m²) = 1 hectare (ha)

(3) **Capacity**
1000 cubic centimeters (cm$^3$) = 1 litre (l)

(4) Mass
1000 milligrammes (mg) = 1 gramme (g)
1000 grammes (g) = 1 kilogramme (kg)
1000 kilogrammes (kg) = 1 tonne.

(5) Currencies

- The Gambia: 100 bututs (b) = 1 Dalasi (D)
- Ghana: 100 Ghana pesewas (Gp) = 1 Ghana Cedi (GH¢)
- Liberia: 100 cents (c) = 1 Liberian Dollar (LD)
- Nigeria: 100 kobo (k) = 1 Naira (₦)
- Sierra Leone: 100 cents (c) = 1 Leone (Le)
- UK: 100 pence (p) = 1 pound (£)
- USA: 100 cents (c) = 1 dollar ($)
- French Speaking territories: 100 centimes (c) = 1 Franc (fr)

Any other units used will be defined.

2. OTHER IMPORTANT INFORMATION

(1) Use of Mathematical and Statistical Tables
Mathematics and Statistical tables, published or approved by WAEC may be used in the examination room. Where the degree of accuracy is not specified in a question, the degree of accuracy expected will be that obtainable from the mathematical tables.

(2) Use of Calculators
The use of non-programmable, silent and cordless calculators is allowed. The calculators must, however not have a paper print out nor be capable of receiving/sending any information. Phones with or without calculators are not allowed.

(3) Other Materials Required for the examination
Candidates should bring rulers, pairs of compasses, protractors, set squares etc required for papers of the subject. They will not be allowed to borrow such instruments and any other material from other candidates in the examination hall.
Graph papers ruled in 2mm squares will be provided for any paper in which it is required.

(4) Disclaimer
In spite of the provisions made in paragraphs 2 (1) and (2) above, it should be noted that some questions may prohibit the use of tables and/or calculators.
